Hybrid battery pack - what's left to do?

Good morning,

we bought a barely used 4xe in Florida in the summer of 2022 and drove it to NJ. For about a year we drove it with no issues and then received the letter to not charge it because of it potentially creating a fire hazard.

After months we finally got the recall and we could charge it again and drive electric. One week after that recall the car started acting up and eventually wouldn't start at all. Back to the dealer and the hybrid battery pack had to be replaced. That's 6 weeks ago now and so far total silence. The dealer indicated they are waiting for the batteries to be shipped and don't know when that will happen. This is bizarre. We don't know what to do. Legal action? Talk to the dealer and trade it in (and obviously take a huge financial hit?). Call Jeep Chrysler (I know that's naive). Anyone has had a similar experience? What do you recommend? This is crazy!

Welcome Aboard! Sounds like the batteries are on back order, that sucks but not much you can do but wait or trade it in I would guess. Unfortunately batteries go bad, sometimes earlier than expected, I have had it happen in laptops and cell phones before. I don't know what if any legal action is possible or what that would accomplish but you could talk to someone if you chose to and see what they say. I would keep bugging the dealer about it. I dont know if [@JeepCares](#) can offer any assistance.

There's no replacement for displacement.

One of many reasons I'm avoiding electrics and hybrids at all cost for as long as possible! Still a relatively new technology that was rushed to market before it had a chance to be perfected. And not as "green" as they would have you believe. Yeah, the vehicle may run "greener" than ICE vehicles, but producing that tech and disposal of the by products is anything but.
